

Liberty Challenger 1&2 programs and K-1 Program

Dr. Maria Montessori believed that young children absorb information at a rapid rate and are in a crucial development period. At this stage, study patterns develop as well as interests in understanding the concepts of math, language, anthropology and various academic necessities.

With this as a foundation, we at the Liberty Montessori School have developed an environment, which is specially equipped to challenge the advanced student. With the proven effective tools, and under the guidance of trained staff, our unique Challenger Program for the advanced students assists the transition from one level of challenges to the next. Students who have acquired a comprehensive knowledge of mandatory fundamentals, following a nurtured pre-school level experience are ready for higher academic challenges. We encourage students to observe, inquire and investigate the scientific process and to gather daily research on topics of interest. Students receive Japanese, Spanish, and French language lessons combined with international cultural programs at a more advanced pace to promote a diverse understanding of the world. These lessons are reinforced with songs, music, stories, movement and interactions with others from different countries. The students receive guidance and learn the essence of teamwork and leadership. The program also emphasizes etiquettes and manners that are essential for successful socialization.

Poetry, Math, Reading, English Language, Geography, Zoology, Chemistry, Health, and Physical education Technology and sciences are taught with hands-on state-of-the-art materials to enhance the concepts and expand the capacity of the student's imagination. Chess and other memory improving games that involve discipline and logic are incorporated into the school's curriculum. Maria Montessori believed that with a general understanding of advanced curriculum, children are inspired to embrace the challenges that are inevitably part of life/

Science is the axiom of life and logic. We provide opportunities for children to enhance their awareness of "cause and effect," through hands-on experiments, pictures, chemistry and educated explanations as to how and why things are on our planet and in the universe. Our own Eco-systems in the classrooms help children to understand and observe the evolution of living organisms that sustain the earth's atmosphere, thus helping each student to be interested in and responsible for the environment on this planet.

Music, Movement, Dance and Fine Arts are important elements that help to formulate rhythm and rhyme while stimulating creativity, hand/eye coordination and memory. Introducing students to various styles, media and history at this early age is intended to nurture the appreciation of artists and their contributions to enrich our world. The Montessori educational system encourages children to choose their own interests. Each specialist functions as a guide who recognizes talents of each individual child. Our aim is to accentuate the positive while helping the students to develop their own talents. We, at Liberty, achieve this through each individual child. Our aim is to accentuate the positive while helping the students develop their own talents. We at Liberty, achieve this through an individualized educational program.
